Or more activities to practice adding and subtracting decimals using base ten blocks. Students write each problem vertically and find the sums. The player started at 1.27 and she added .34. Next, she adds the cubes to the hundredths pile and the longs to the tenths column. The player has been moving around the board and already has 1.27 and now she has landed on a space that tells her to add .34. My Process I begin with guided notes. They have step-by-step instructions and graphics on how to create a visual model as well as the standard algorithm. Adding and subtracting decimals can be a hard concept to conquer. The first one was all about modeling using base ten blocks, and today I'm providing a game to further this practice. If they land on an addition space, they add that number to the mat. Print off the game board and record sheet on card stock paper.Place the recording sheet in a sheet protectorGather up base ten blocks, a die, game pieces, and dry erase markers. All problems contain whole numbers or decimals with a tenths place only. We go through an example problem together. Teaching remotely? \*Digital Version\* This skill can be taught and assessed during remote learning. Find out how you can teach adding and subtracting digitally. Using visual models in addition to just teaching the standard algorithm can be a bit tricky, but I'm going to show you a few quick tips to make this easier. After she had done some exchanging she had one whole, six tenths, and one hundredth. Each problem needs to be re-written vertically and students must line up the columns properly.5th GradeFind the Mistakes (Addition)These decimal addition problems were not solved correctly. Then solve to find the correct sum.4th through 6th GradesShade the correct portions of each block illustration to show the given decimal. All questions require students to count by quarters (example: 2.0, 2.25, 2.5, 2.75, 3.0, 3.25, and so on).2nd through 4th GradesFind the Mistakes (Addition)These decimal addition problems (hundredths) have errors. Check out my tutorial videos that will take you step-by-step through a sample problem for both adding and subtracting decimals using the standard algorithm and a visual model. Keep reading past the videos to see my process and find out how you can share this information with the parents in your class. Each time it is their turn, they roll and move. Includes tenths and hundredths.4th through 6th GradesOn this worksheet students are given two decimal addends for each problem. Check out some of these resources that use various strategies, including visual models, to teach common math skills: Add Decimals: Tents FREE Solve twelve decimal addition problems. Students then work independently creating visual models for adding and subtracting decimals. Then, they solve each of the problems using the standard algorithm. Finally, they compare their answers from both strategies to make sure they match. Unfortunately, there are mistakes in the solutions. Do you struggle with teaching the various strategies for adding and subtracting decimals? So she takes out 10 hundredths and places 1 tenth in the tenths column. Explain the mistakes you see.
